Summary

Wangari grew up at the foot of Mount Kenya among beautiful trees. These trees were home to birds and a source of wood for the villagers. The forest provided a rich soil on which Wangari's mother and other women grew foodstuffs like sweet potatoes, sugar cane and maize. Wangari used to help her mother with these activities. When she grew up, she obtained a scholarship to study in America. She returned to Kenya after six years to find that the forest has been destroyed. Women became bent from fetching wood in faraway places; the soil no longer produced good yields and the birds all disappeared. She cried at this sight and decided to plant trees. She mobilized women from her village to do the same and they planted many trees. Soon after, news of Wangari's vision of tree planting spread to other villages where women joined the tree planting movement. When these trees grew,

the government sent deforestation agents to cut them down for lumber claiming that they wanted to build infrastructure. Wangari opposed them. She was imprisoned but it did not stop the news of her tree-planting movement from spreading to other African countries, where people also started planting trees. Soon all of Kenya was covered with trees. The land regained its beautiful forests. Women walked tall as they no longer had to go far away to fetch firewood. From the top of the Mount Kenya, there is a beautiful view of the green forest Wangari restored in Kenya and in Africa.

Analysis

Many world communities accord great value to forests. Many lives, human, as well as non-human, depend on the forest. For humans particularly, it provides habitat and a rich soil on which crops are grown, and also a good source of potable water. Unfortunately, with urbanization in Africa today, many of these forests have been destroyed and no replacements have been planted. The above story is a true-life account of Wangari Maathai who takes it upon herself to save her Kenyan country from becoming a desert by planting trees to replace the destroyed forest. As a little girl growing up at the foot of Mount Kenya, she appreciated the value of trees – they provided shade from the sun, rich soil to grow food crops, wood with which to make fire and a habitat for birds. Seeing the effects of the felling of these trees – the barrenness of the soil, the backbreaking long distances women go to fetch wood, and the disappearance of the birds – Wangari resisted opposition from men, braved social hierarchy and led women into a green revolution. The positive results serve as a booster to other communities in and beyond Kenya who followed in Wangari's footsteps.

The story speaks to the necessity of being environmentally conscious and emphasizes the role women play in achieving this. It also brings the African woman to the center of the fight for the protection/preservation of nature as shown in the story because in many African communities, it is women who interact more with the land. Young girls are therefore encouraged by Wangari's story, to stand up for what will help to save the world.

The illustrations correspond to Wangari's trajectory from her childhood to her return to a tree-less homeland and to the beginning of the tree planting movement, with the involvement of women and successful planting of millions of trees.
